Submitted (22-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
> On Sep 18, 2002 this sequence version replaced gi:21738715.
> The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/fat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature table. Submitted (26-MAR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA 3 (bases 1 to 275924)

COMMENT

Center project name: GRFW
Center clone name: CH230-95117
Center clone name: CH230-95117
Center clone name: CH230-95117
Assembly program: Phrap; version 0.990329
Consensus quality: 234606 bases at least Q40
Consensus quality: 23765 bases at least Q20
Consensus quality: 238894 bases at least Q20
Estimated insert size: 264374; sum-of-contigs estimation
Quality coverage: 3x in Q20 bases; sum-of-contigs estimation Contact: hgsc-help@bcm.tmc.edu Center: Baylor College of Medicine Center code: BCM Web site: http://www.hgsc.bcm.tmc.edu/ ----- Genome Center

NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
NOTE: This sequence may represent more than one clone.
NOTE: This is a "working draft' sequence. It currently
consists of 4 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved. 10839 10939 273286 273386 274619 10838: contig of 10838 bp in lengt:
10938: gap of unknown length
273285: contig of 262347 bp in leng:
273385: gap of unknown length
274618: contig of 1233 bp in length
274718: gap of unknown length in length

> On May 13, 2003 this sequence version replaced gi:24818892.
> The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome Submitted (19-FEB-2002) Human Genome Sequencing Center, Depar of Molecular and Human Genetics, Baylor College of Medicine, Baylor Plaza, Houston, TX 77030, USA 3 (bases 1 to 240657) Rat Genome Sequencing Consortium. shotgun sequence table. NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORKVEEP; Information on the WORKVEEP database can be found at primary accession on the WORKVEEP database can be found at part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10 http://www.sanger.ac.uk/Profects/Crelo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Direct Submission

It currently consists of 24 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will

NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   GTCTACCTGGTGTCCCACCTGAGTCAGCGG 160820

Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Center: Baylor College of Medicine

NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  255980

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a new isolated nucleic acid termed ovarian CC specific nucleic acid (OSNA) comprising: (a) a nucleic acid molecule that CC encodes any of 53 fully defined protein sequences appearing as ABU61018-CC ABU61070 (termed ovarian specific proteins, OSP); (b) any of 76 fully CC defined nucleotide sequences appearing as ABU92187-ABX92262; or (c) a CC sequence having at least 60% sequence identity to the nucleic acid CC molecule of (a) or (b). Also included are a method for determining the presence of an ovary specific nucleic acid (OSNA) in a sample, a vector CC comprising an OSNA, a host cell comprising the vector, an isolated OSP CC polypeptide, an anti-OSP antibody or fragment, a method for determining CC the presence of an ovary specific protein in a sample and a vaccine CC comprising an OSP or OSNA. The methods and compositions of the present consprising an OSP or OSNA. The methods and compositions of the present conspination are useful for identifying, diagnosing, monitoring, staging, CC imaging and treating ovarian cancer and non-cancerous disease in ovary tissue. The present sequence is an OSNA of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated OSNA nucleic acid and encoded polypeptide, useful identifying, diagnosing, monitoring, staging, imaging and treat ovarian cancer and non-cancerous diseases in ovarian tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 365
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; Page 185-186; 224pp; English.

New polynucleotides comprising sequences assembled from expressed sequence tags (ESTs), useful for treating cell-proliferative, neurodegenerative, autoimmune, genetic, myeloid or lymphoid, or por coagulation disorders.

Claim 1; SEQ ID NO 94; 1012pp + Sequence Listing; English.

The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ARZ11119-CARZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for cidentifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP6984) are useful as molecular weight comarkers, as a food supplement, for generating antibodies, in medical comarkers, as a food supplement, for generating antibodies, in medical comaring, screening and diagnostic assays and for treating cell-complificative discrete (cancer), neurodegenerative diseases (Parkinson's complificative discrete; neurodegenerative diseases (Parkinson's complification disorders, wound, burns, incision, ulcers, liver completes, lupus) genetic disorders, wound, burns, incision, ulcers, liver completes, infections (bacterial, viral, fungal, parasitic), complete fibrosis, infections (bacterial, viral, fungal, parasitic), complete fibrosis, infections (bacterial, viral, fungal, parasitic) continuing fibrosis, infections (bacterial, viral, fungal, parasitic) continuing fibrosis, infections (bacterial, viral, fungal, parasitic) continuing fibrosis, and for this patent did not form part continuing fibrosis, and for the printed specification, but was obtained in electronic format continuing fibrosis, and for the printed specification, but was obtained in electronic format continuing fibrosis and for the printed specification, but was obtained in electronic format continuing fibrosis and for the printed specification, but was obtained in electronic format continuing fibrosis and for the printed specification, but was obtained in electronic format continuing fibrosis and for the printed specification and format fibrosis and for the printed specification and format fibrosis and format fibrosis and for the printed specification and format fibrosis and for the printed specification and format fibrosis and format fibrosis

The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAVS9502) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 186 novel genes and their fragments (nucleic acid sequences: AAV59511- V99812; amino acid sequences AAV74731-W75026) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polymucleotides. Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in (see AAV59511 for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated human genes and the secreted polypeptide(s) they encode useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders.

cDNA sequence #48 containing

coding region of

ង

human secreted protein.

The invention relates to an isolated protein that is one of 186 human

Alignment Scores: disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional cencoding one of the novel human secreted proteins of the invention. Note: This sequence did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=6420526B1 secreted proteins, given in the specification, encoded by one of 309 cDNA sequences also given in the specification. The protein is used in a pharmaceutical composition used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders Sequence 1049 B₽; 223 A; 258 C; 303 G; 265 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      21
```

```
CC ABN87790 to ABN87882 represent human ovary specific nucleic acid (OSNA)
CC sequences, and ABB79297 to ABB79370 represent ovary specific protein
CC (OSP) sequences from the present invention. OSNA and OSP sequences have
CC cytostatic activity, and can be used in vaccine production and gene
CC therapy. An antibody that specifically binds to an OSP can be used for
CC treating a patient with ovarian cancer, particularly for inducing an
CC immune response against the ovarian cancer cell expressing the OSNA or
CC OSP. The OSNAs and OSPs can also be used for diagnosing and monitoring
CC the presence and metastases of ovarian cancer in a patient

New polypeptides encoded by polynucleotide sequences over-expressed breast tumor tissue are useful to detect, monitor and treat breast

Claim 13; Page 50; 52pp; English.

The present sequence encodes a breast tumour-associated protein. It was shown to have at least two-fold overexpression in breast tumour tissue. The invention relates to an isolated polypeptide comprising at least an immunogenic portion of a breast tumor-specific protein, or its variant that retains the ability to react with antigen-specific antisers. The breast tumour polynucleotides, polypeptides and antibodies are useful for inhibiting development of breast cancer. The polynucleotides may be used to design primers and probes for detecting and monitoring breast cancer

Sequence 550 BP; 102 A; 163 C; 164 G; 118 T; 0 U; 3 Other;

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.

SEQ ID NO 624; 103pp; English.

The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCE) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abbrrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in the constitution of genetic disorders or other that to assess biodiversity and the products of the treat of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8 8 8 8
                                                      The present invention relates to a microarray comprising a matrix of at least one cDNA probe from a set of probes immobilised to a solid surface in a predetermined order, where a row of pixels corresponds to replicates of one distinct probe from the set. The probes are complementary to nucleic acid sequences that are expressed differentially in aggressive as compared to non-aggressive types of clear cell renal carcinoma (CC-RCC) and that hybridise to the probes under high stringency conditions. The microarray is useful for the propnosis of patients with CC-RCC, wherein aggressive and non-aggressive CC-RCC tumour types are characterised by differential expression profiles of genes that hybridise with one or more probes immobilised on the microarray. The arrays are useful for gene expression profiling of tumour and normal tissues. The present sequence represents a human CDNA sequence differentially expressed in aggressive vs. non-aggressive type CC-RCC phenotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New microarray, comprising a matrix of cDNA probe from a set of probes immobilized to a solid surface in predetermined order, useful in the prognosis of patients with clear cell renal carcinoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; SEQ ID NO 459; 179pp; English.

                                                                                      The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed; as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions; and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present DNA sequence represents a gene of the
                                                                                                                                                                                                                                                                                                                                                                                                                      New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Tang YT, Asundi V, Goodrich RW, Ren F, Zhang J, Zhao Ghosh M, Xue AJ, Wehrman T, Weng G, Zhou P, Drmanac F Ma Y, Wang D, Chen R, Xu C, Boyle BJ;

Novel human secreted protein useful for treating, preventing or diagnosing cancer, hepatitis, psoriasis, asthma, diabetes mellitus, anemia, epilepsy, cataract, Alzheimer's disease.

Claim 101; Page 185-186; 188pp; English

CC antiarteriosclerotic, antiatherosclerotic, hepatotropic, cycostatic, antiateriosclerotic, antiatherosclerotic, antiatherosclerotic, antiatherosclerotic, antiathetic, antialaemic, antidiabetic, cartininflammatory, neuroprotective, antiulcer, antidiabetic, cantininflammatory, neuroprotective, antiulcer, antidiabetic, cantininflammatory, antiarthritic, cardiant, hypotensive, anticonvulsant, concerptor, immunosuppressive, antiparkinsonian and ophthalmological cativity. The polymucleotides and polypeptides of the invention can be cused for diagnosing, treating or preventing cell proliferative disorder c.g. arteriosclerosis, cirrhosis, hepatitis, cancer, cardiommune/inflammatory disorders e.g. acquired immunodeficiency syndrome c.g. altergies, asthma, anaemia, diabetes mellitus, Crohn's disease, cetc; cardiovascular disorder e.g. myocardial infarction, angina pectoris, competitus, carcer e.g. myocarditis, psoriasis, rheumatoid arthritis, cc hypertension, Raynaud's disease, myocardial infarction, angina pectoris, carcer, candiovascular disorders e.g. epilepsy, Huntington's disease, parkinson's disease, Alzheimer's disease, Creutzfeldt-Jakob disease, Parkinson's consenses, alzheimer's disease, Creutzfeldt-Jakob disease, Parkinson's consense in consense in somatic or germline gene therapy, to generate a transcript image of a tissue or cell type, for detecting differences in cormal, carrier or affected individuals, and as hybridization probes for mapping naturally occurring genomic sequences. ABS5754-BBS57569

CC mapping naturally accurring genomic sequences. ABS5754-BBS97569

CC persesent cDNA's encoding the secreted proteins represented by ABB84649-CC ABB84673, described in the disclosure of the invention This invention describes novel secreted proteins (SECP) which have antiarteriosclerotic, antiatherosclerotic, hepatotropic, cytostatic,

                                                                                                                                                                                                                                                                                            The invention relates to a combination comprising a plurality of cDNAs, or their complements that are differentially expressed in cancer and other proliferative disorders. The combination is useful in detecting changes in expression of genes encoding proteins that are associated with senescence and in diagnosing, staging, treating, or monitoring the progression or treatment of subjects with proliferative diseases such as cancer e.g. adenocarcinoma, leukaemia, lymphoma, melanoma, myeloma, sarcoma, teratocarcinoma; cancer of the adrenal gland, bladder, bone, bone marrow, brain, breast, cervix, colon, oesophagus, gall bladder, bone ganglia, heart, kidney, liver, lung, muscle, ovary, pancraas, parathyroid gland, penis, prostate, salivary glands, skin, small intestine, spleen, stomach, testis, thymus, thyroid and uterus. The present sequence represents cDNA of genes that are downregulated in senescent cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; senescence; ss; gene; cancer; proliferative disorder; leukaemia; adenocarcinoma; lymphoma; melanoma; myeloma; sarcoma; teratocarcinoma; adrenal gland cancer; bladder cancer; bone cancer; bone marrow cancer; brain cancer; breast cancer; cervical cancer; colon cancer; heart cancer; oesophageal cancer; gall bladder cancer; ganglial cancer; kidney cancer; liver cancer; lung cancer; muscle cancer; ovarian cancer; penile cancer; panctreatic cancer; parathyroid gland cancer; prostate cancer; salivary gland cancer; skin cancer; small intestine cancer; spleen cancer; stomach cancer; testicular cancer; thymic cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New combination comprising cDNAs or their complements, useful for detecting changes in expression of genes encoding proteins associated with senescence, and in diagnosing, staging or treating proliferative diseases, e.g. cancer.

HisAlaValGluProValThrSerIleLeuLeuLeuPheLeuLeuMetMetLeuGlyVal 103

The invention relates to novel isolated human secreted polypeptides (I) CC and polynucleotides (II). (I) and (II) are useful for treating conditions such as arthritis, nephritis. Crohn's disease, ischaemia-reperfusion injury, shock, sepsis, immune responses, and is involved in increasing haematopoiesis, stem cell survival, bone growth can remodeling. (I) (II) and modulators of (II) are useful for prophylaxis or treatment of one or more cancers. (II) is also useful for creating transgenic animals useful for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides. (I) induces the proliferation of neural cells and regeneration of nerve can brain tissue and is useful for the treatment of central and correspond to the polypeptides. (I) are useful for the treatment of central and corresponding to the polypeptides. (I) are useful for the proliferation of neural cells and regeneration of nerve can brain such as Alzheimer's, parkinson's disease, Huntington's disease, and amyotrophic lateral corresponding to the proliferation of haematopolesis and is useful for treating mysloid or lymphoid cell disorders, platelet disorders such as thrombocytopenia and for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth, and in tissue repair, healing of burns, incisions, ulcers,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213). of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (f) assessing the aggressiveness or indolence of prostate cancer in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       17-FEB-2000; 2000US-0183319P.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
